Milton's Proposal

To use technology to assist the coordination of groups of kids led by parent volunteers to walk to school.

This is also known as a **walking school bus** where groups of 4 to 6 kids walk to school with a lead adult walker as the chaperone/driver of the group.

Study and develop an interactive app for smartphones that will provide real-time group communication for parents of kids who want to walk to school in groups.

Trusted communities sharing kids rides

Safe • Smart • Secure

Welcome to Milton GA

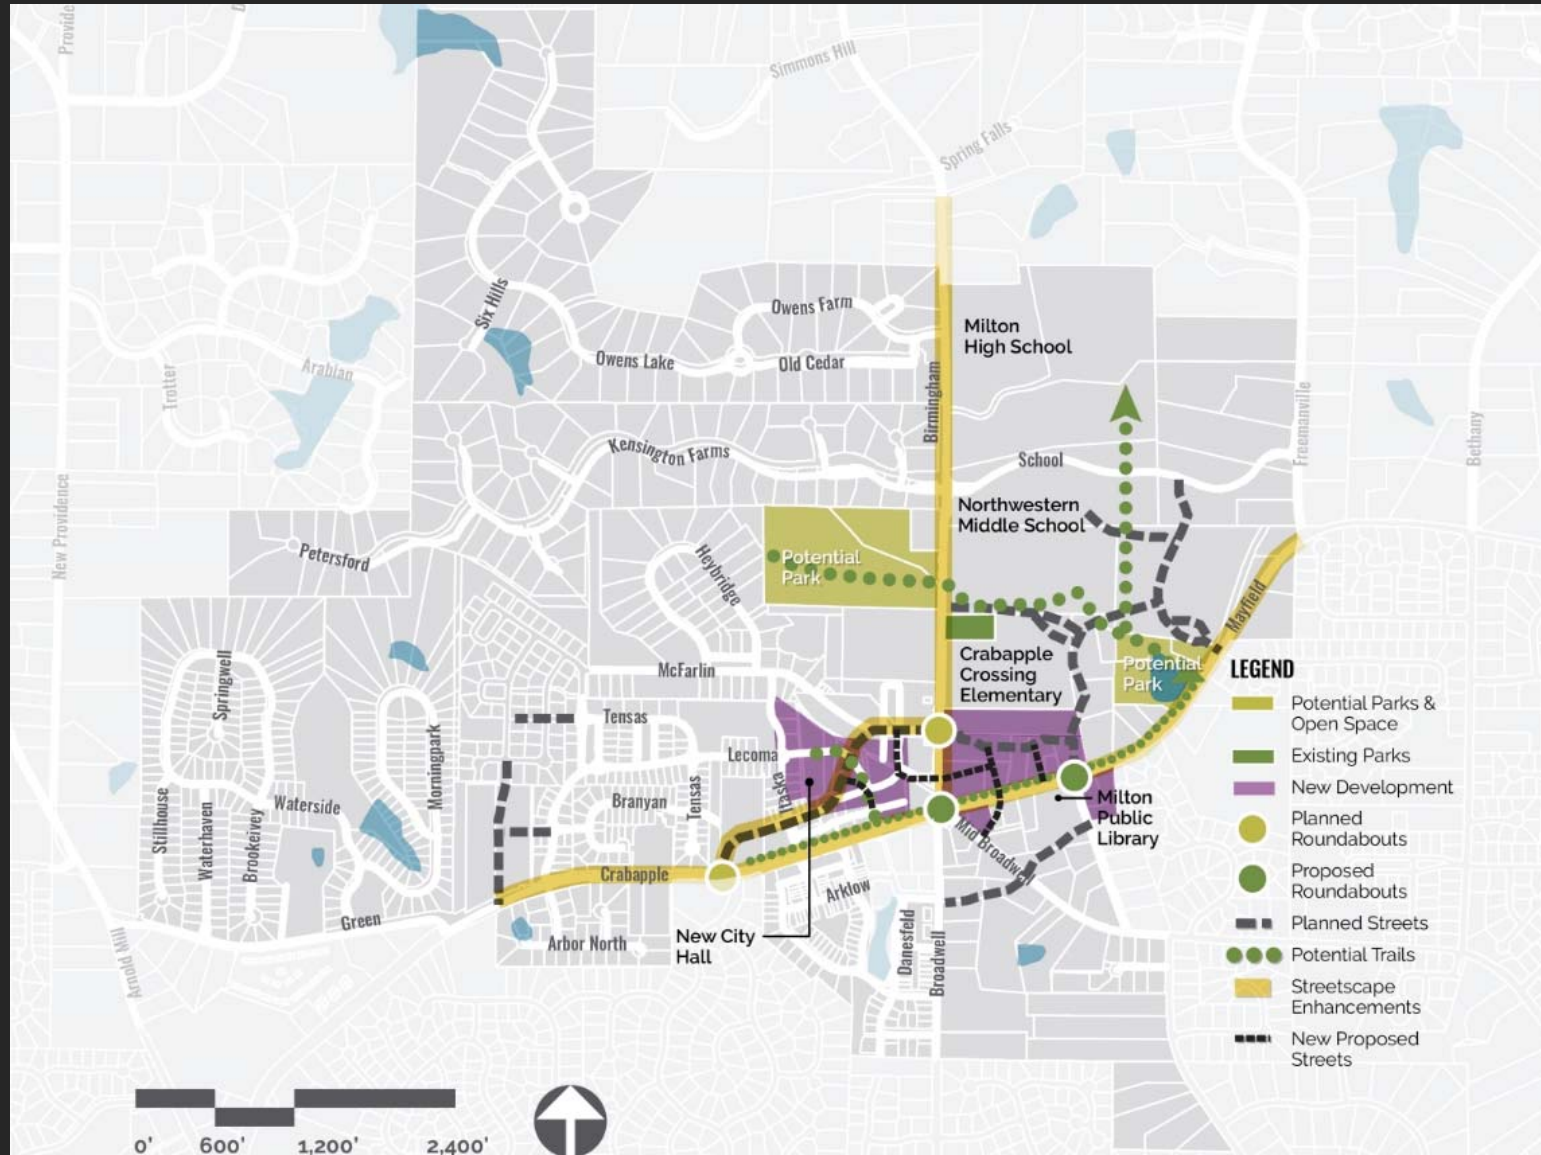

Milton's Highlights

- 39 square miles
- Approximately 39,000 residents
- Family oriented, highly educated and young
- 20% of population is 14 years or younger

Introduction to Study Area

Downtown Crabapple

MILTON 
ESTABLISHED 2006

Georgia Tech 

Walk to School Research

Motivation

Nationally, only 9.6% of kids aged 5-18 walk to school in 2017.

- Down from almost 50% of kids K-8 in 1969

Yet walking to schools offers multiple benefits:

- Less greenhouse gas emissions and congestion
- Increases physical fitness
- Better academic performance

Motivation

Literature says many reasons why children might not walk to school:

- Too far away
- Driving is convenient for the parent
- Not a lot of other children walking
- No available sidewalks or crossings
- Aggressive drivers
- Stranger danger, lack of supervision

- Walking School Buses (WSBs) as a solution:
 - Volunteer parent leads group of children to school on foot
- WSB Results
 - Create a habit of walking in later grades
 - Bolsters communities and stimulates social interaction
- WSBs can have long-term sustainability issues
 - A couple parents doing most the logistics and leading
 - The designated routes not being safe
 - No incentive programs
 - Students 'graduate' from WSB and walk to school on their own, but are not replaced

Motivation

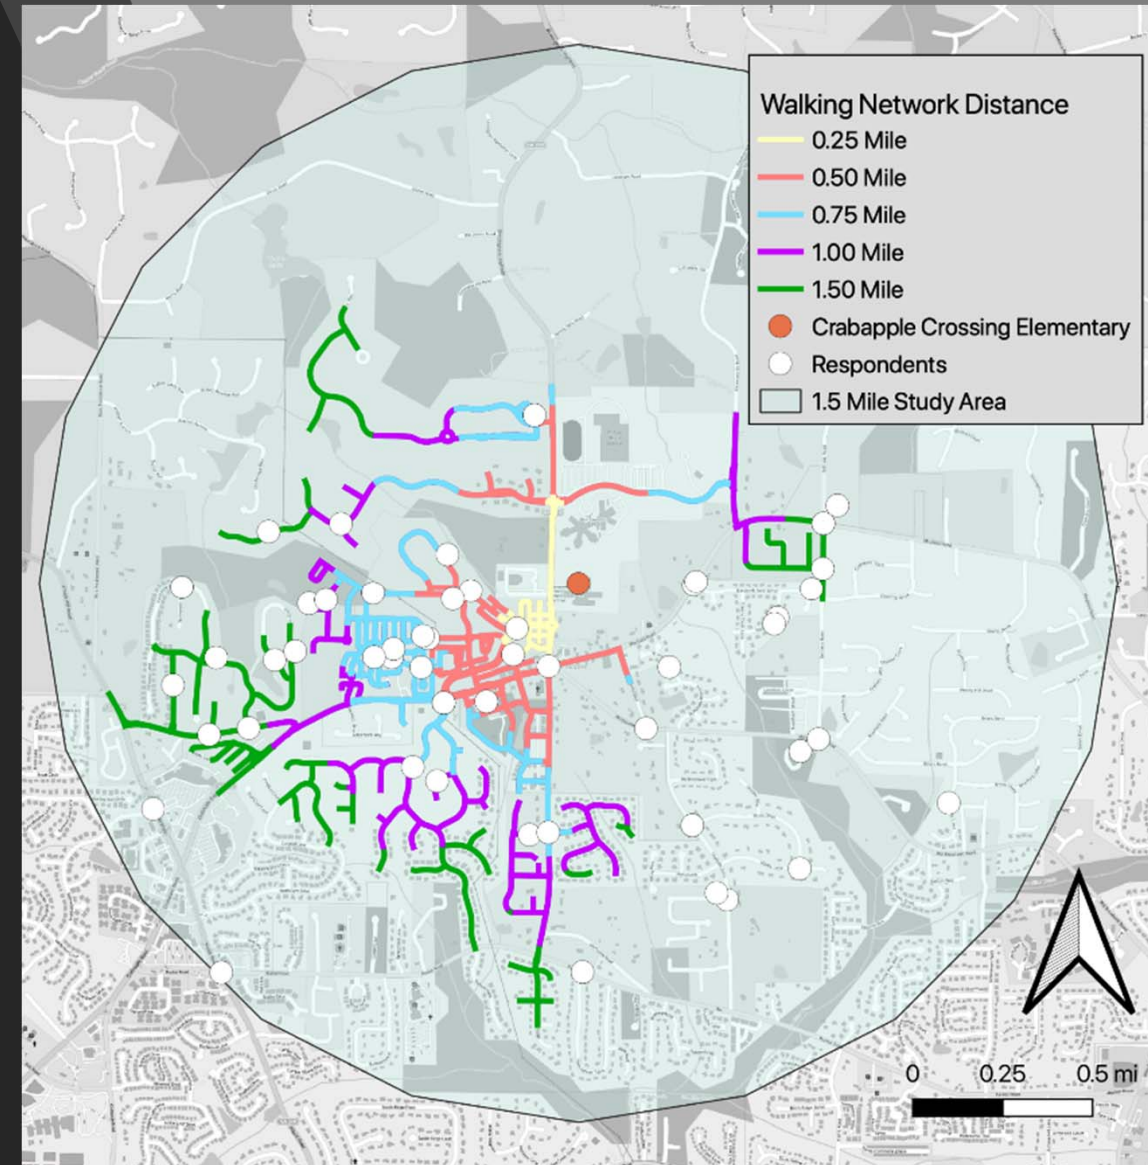

Research Methodology

- Goals
 - Create draft routes and a walking network for WSB group creation and planning.
 - Find key influencing factors that can help determine the likelihood for a parent participating in a WSB.
 - To ensure the WSB app is responsive to the specific needs of Milton.
- Internet Survey
 - Distributed through school newsletter.
 - 134 parent responses representing 168 elementary and middle school students (7.9% response rate).
- Video Counts

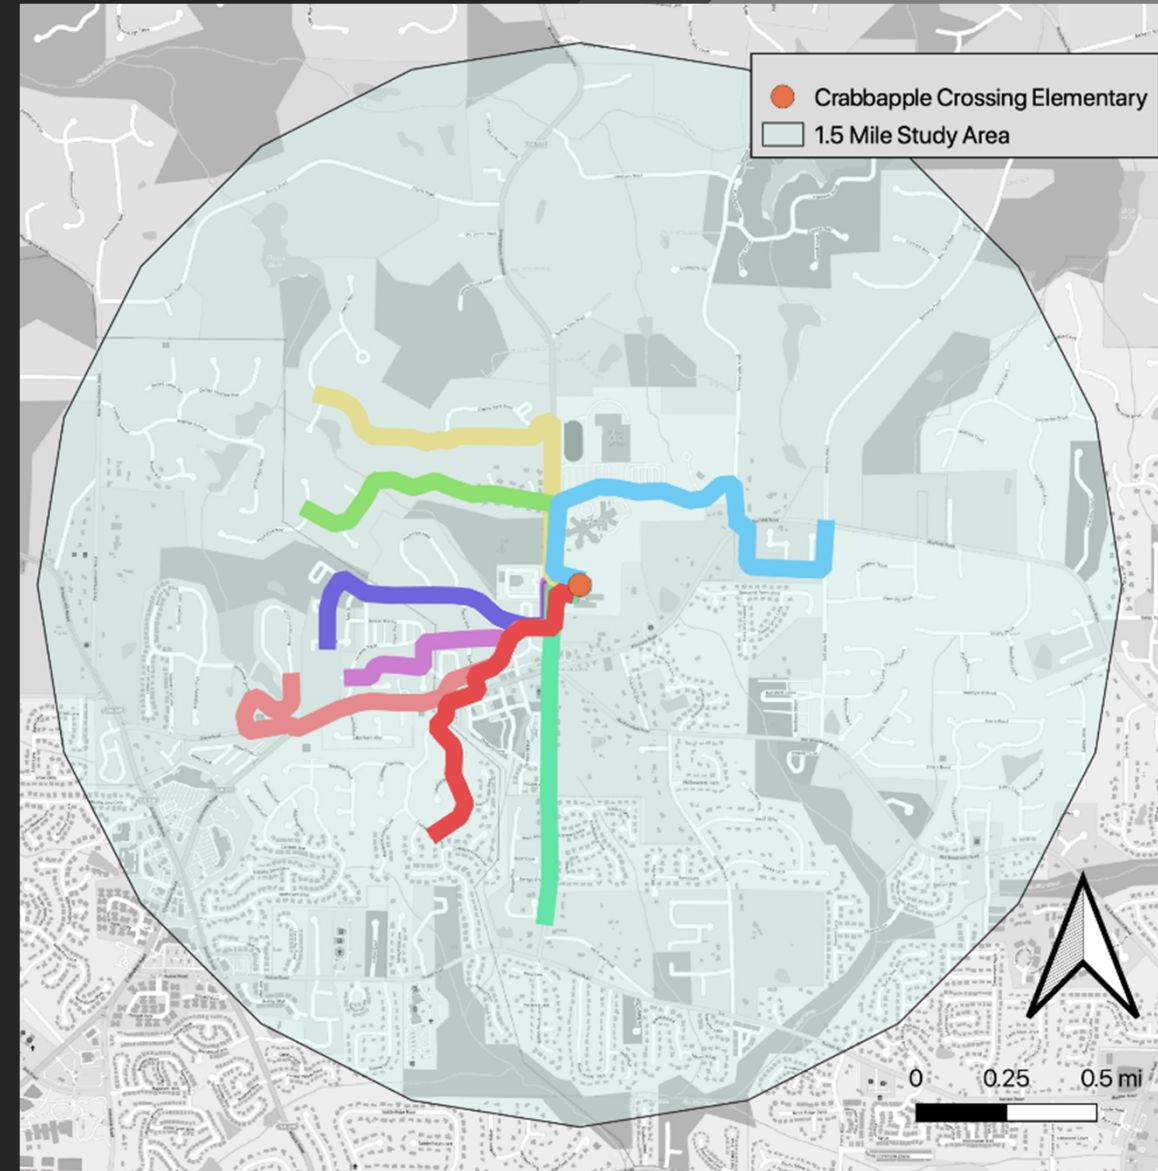

Mapping Respondents and Routes

- Identify a walking network for Milton for routing WSBs
 - Sidewalk Presence
 - Crossing (e.g. crosswalks, PHBs, walk signals)
 - Speed Limit
- 66% of elementary students and 30% of middle school students within 1.5 miles of school
- Geocoded respondents to draft initial routes

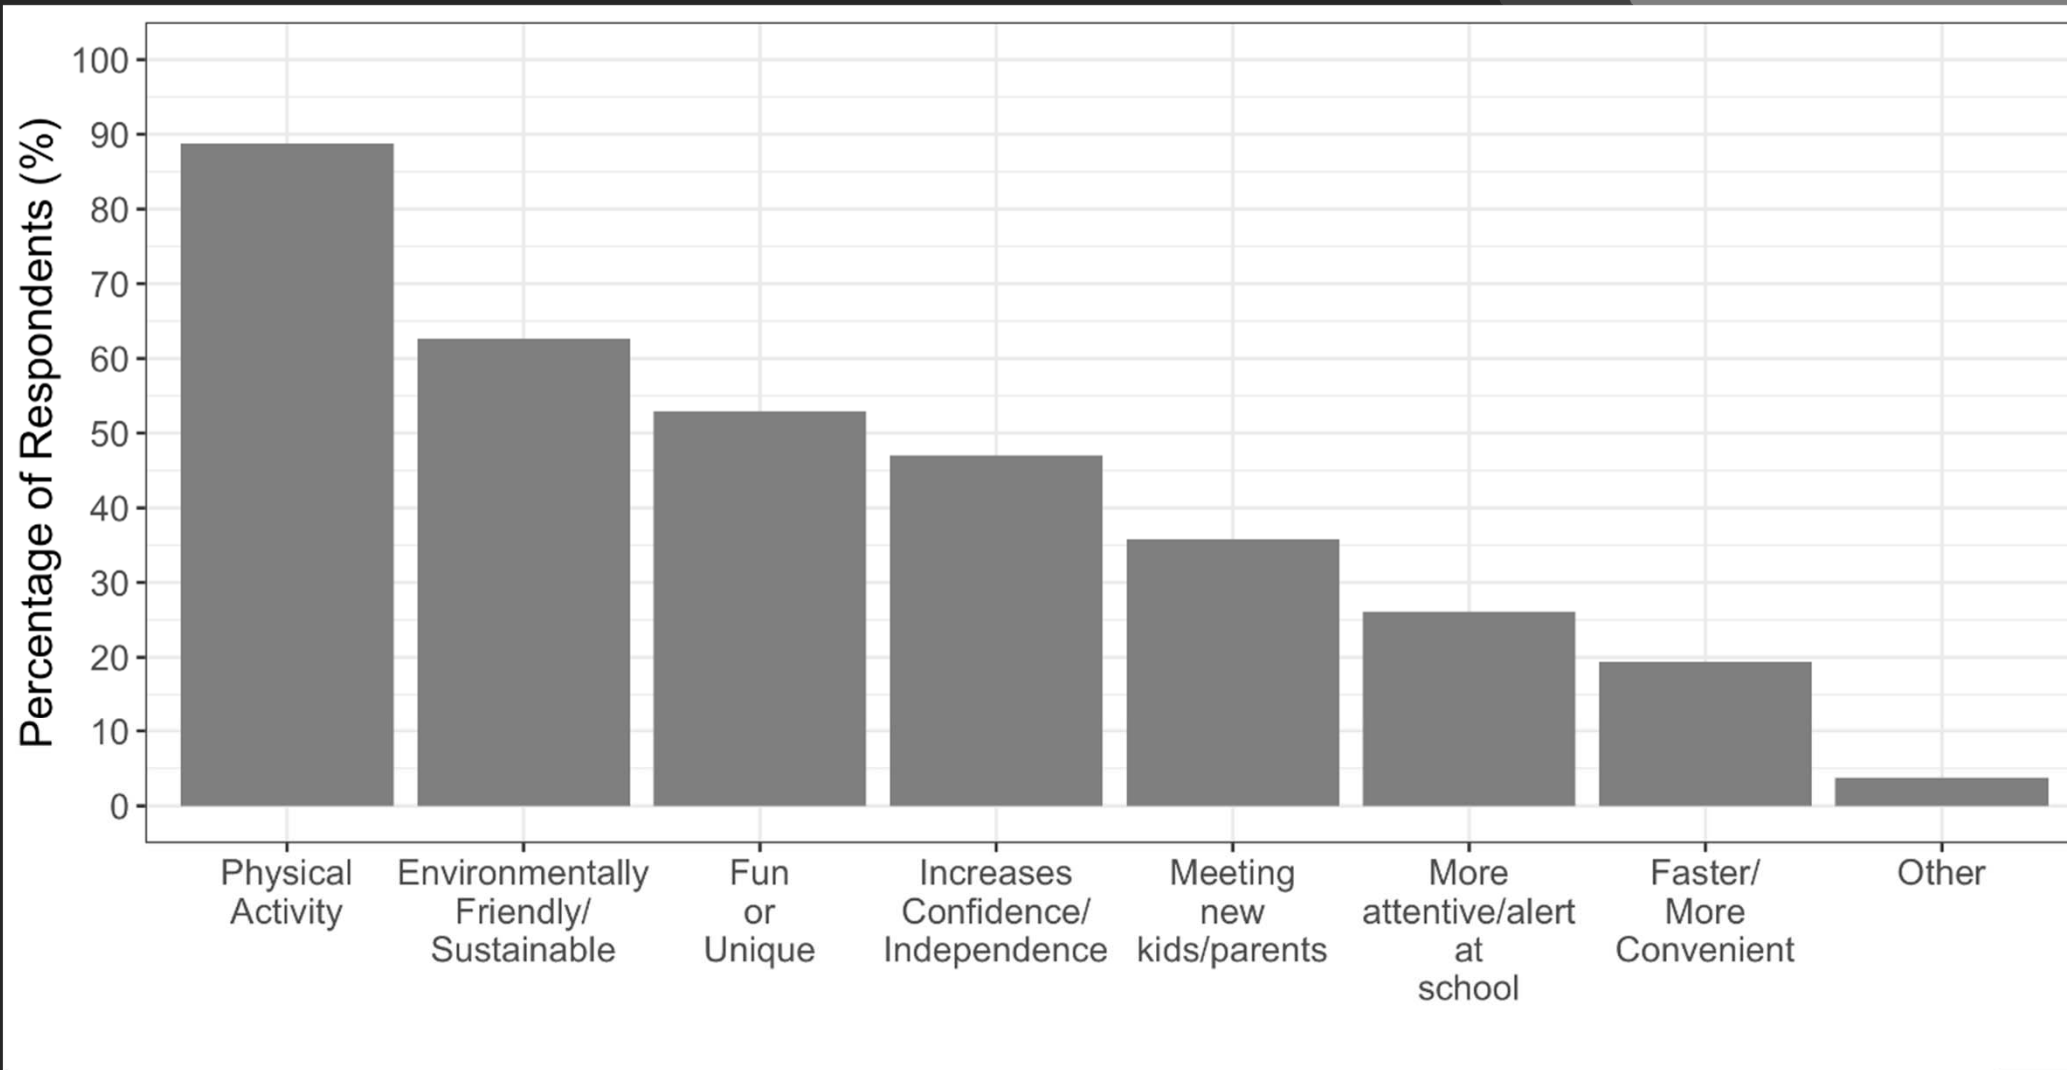

Mapping Respondents and Routes

- Respondents were concentrated towards denser southwestern section that is well serviced by sidewalks.
- Indicates that creating routes based on neighborhoods is best approach.
- Walking network can be used to plan routes as needed.

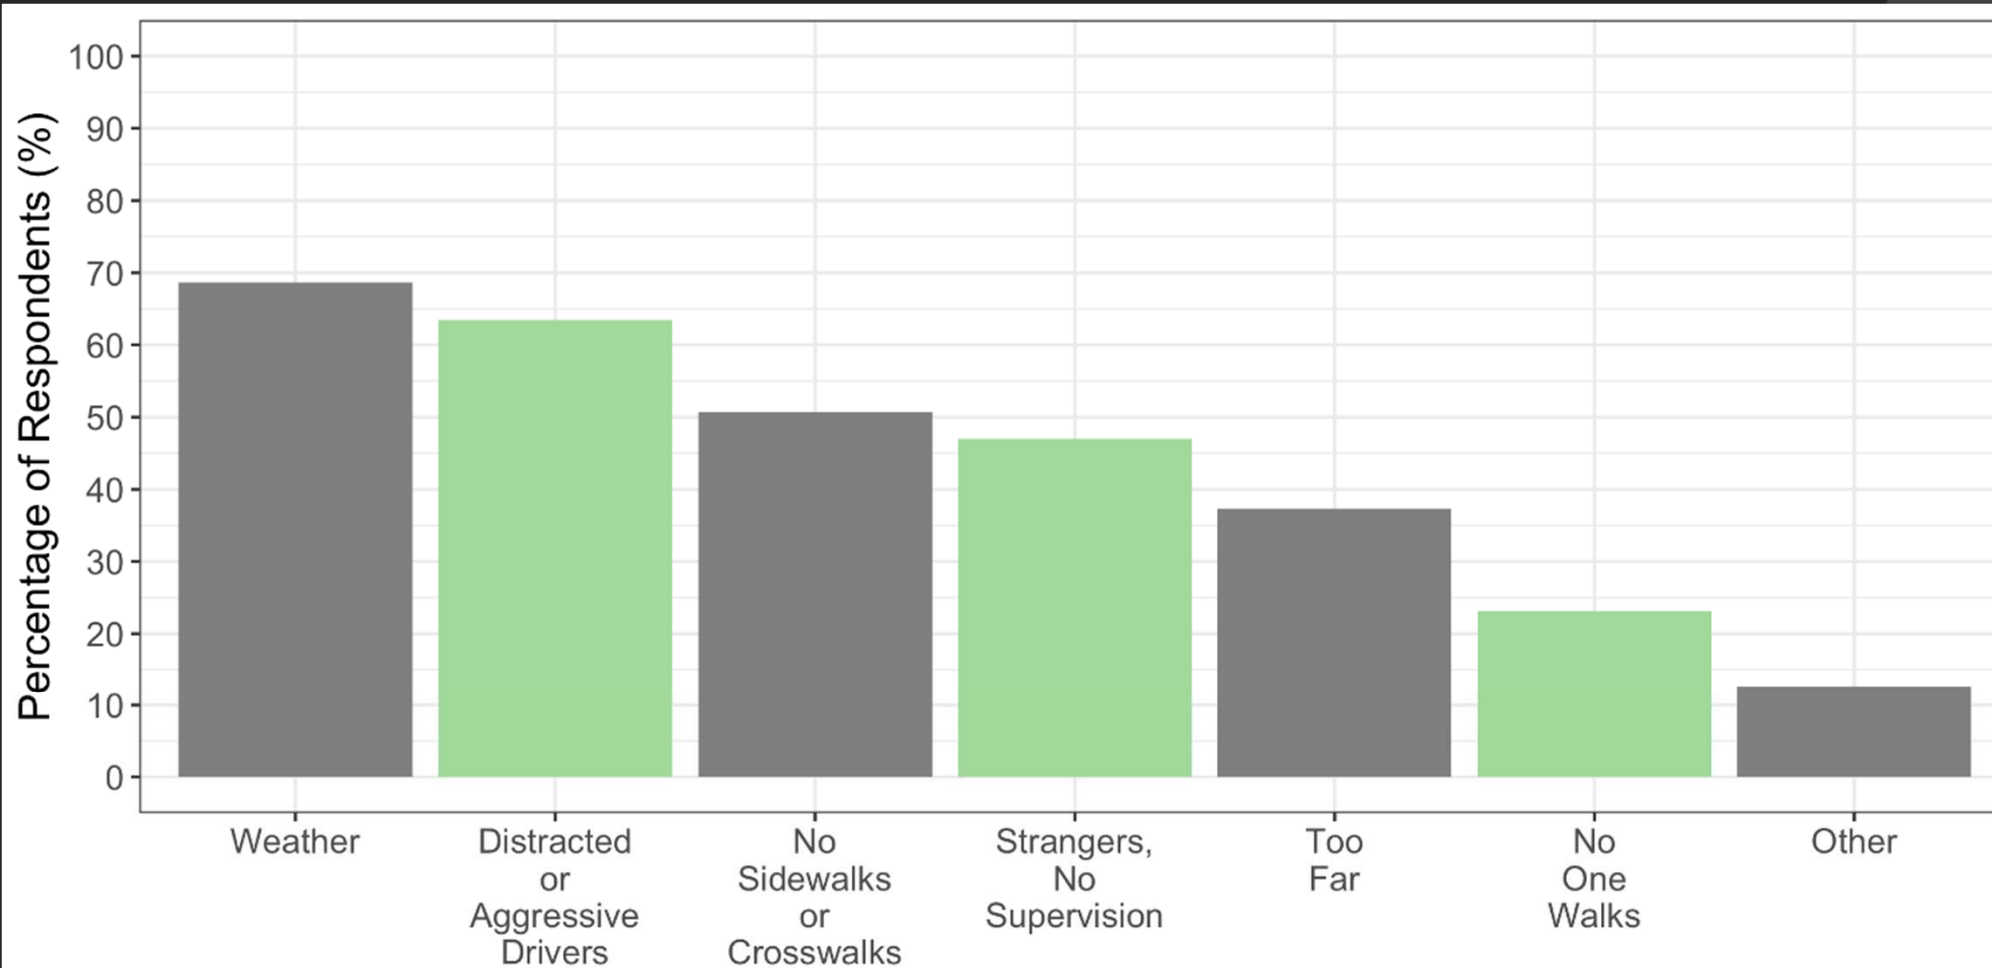

Benefits & Barriers

Benefits of walking to school well known no matter the current behavior.

Benefits & Barriers

Barriers brought up by respondents directly addressable by a WSB.

Walk Alone Age

- Major spike in 6th grade, then 9th grade.
- Around 10% did not think children could ever walk to school.
- Demonstrates why elementary should be the focus for the app.

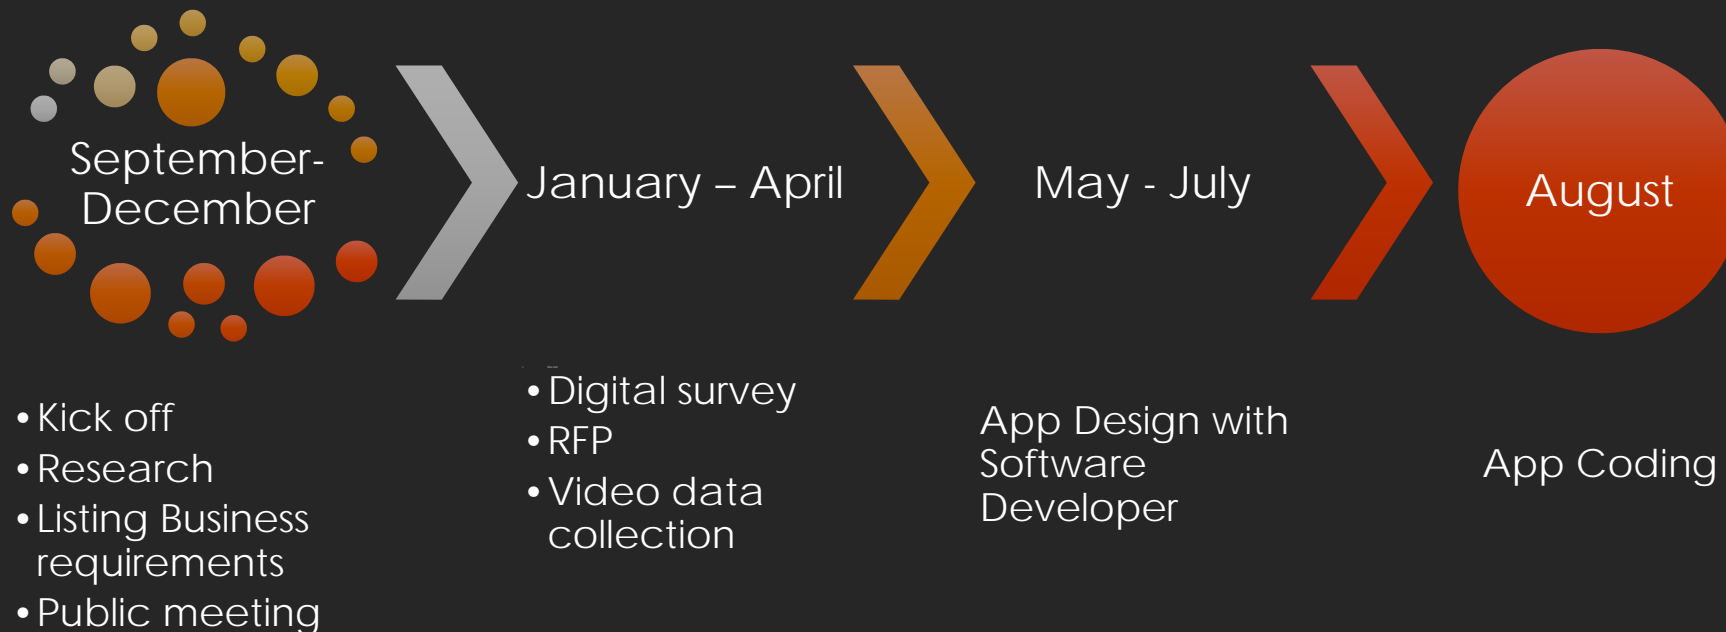

Conclusions

- A walking network and routes were generated for use in app planning and advertising.
- Walk to School day participants are the best pool of volunteers for the WSB App.
- Milton's Walk to School day program puts it in a unique position to make a regular WSB program work compared to other schools.
- Recognition of benefits / barriers not significant, meaning convenience of current behaviors is a driving factor.
- When app is released, follow-up survey and counts will be done.

Project Details of Milton's Smart and Safe Routes to School Project

Project Timeline

Public engagement
December 5, 2019
July 13, 2020

On-site visit to walking
school day
January 17, 2020

Meeting with Fulton
County School district
leader
November 2019

Meeting with legal
advisors

Public Engagement and Collaborations

- 2 public meetings with community in December and June
- Site visit at Walk to School day
- Digital Survey: 178 responses
- Weekly project team meetings
- Monthly project progress reports
- Mid-year review
- 2 Internship opportunities provided

Monthly Walk to School Day at Crabapple Crossing Elementary School

Why Walking School Bus App?

Challenges with Organizing WSBs

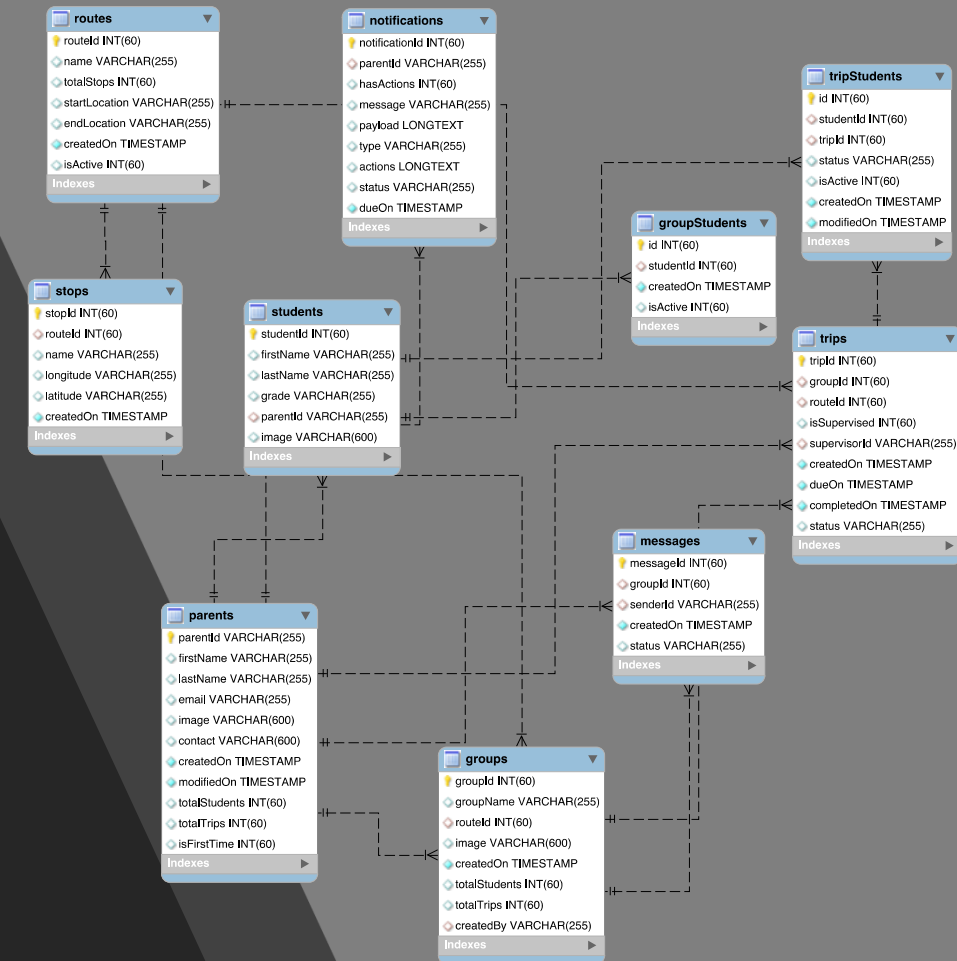

- Finding other parents willing to participate and volunteer
- Need flexibility in scheduling / cannot commit to walking daily
- Trust but verify: ability to check the real-time location of the child while on the road provides peace of mind

Design and Development of App

Stages of Development

- Business requirements
- Designing app wireframe
- App database design
- Functional design and flow in the app
- Designing maps and routes and grouping structure
- Selecting a color scheme and other style elements
- User interface improvements
- Testing of the app
- Developing terms and privacy policy
- Administration policy and structure

WSB App: Framework Development

- Identification of challenges for WSBs that can be addressed with technology
- Functional requirements for App
- Data security, privacy needs and challenges
- App Performance
 - Scalability
 - Maintenance

MILTON 
ESTABLISHED 2006

WSB App: Core Functionalities

- *Dynamic walk group* formation with predefined routes– reduced administration effort
- *Flexible scheduling* – no long term commitment
- *Tracking* of WSB
 - Check-in of individual students
 - Track supervisor/students while WSB is on the road
 - Notification when WSB reaches school (Check-out)
- *Security*
 - Invitation only sign-up with email validation (OTP)

WSB App: Core Functionalities

- *Communication* – Convenient call and message links to parents' phone number
- *Admin Panel*
 - Update of routes and email lists by community volunteers
 - Ability to generate performance metrics
- *Cloud based hosting* – eliminate dependence on cross-organization hardware, software and IT personnel capabilities
- Dual environment development – iOS™ and Android™ apps mirror functionality, look, and feel

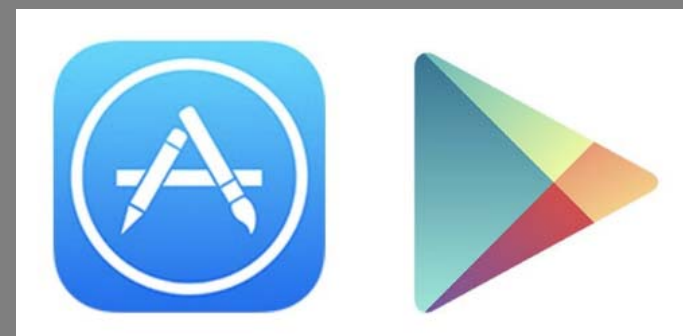

Waddle

Walking School Bus App

Main Features

- Grouping
- Scheduling
- Supervising
- Tracking
- Messaging
- Notification

Proposed
Release Date
October 1, 2020

Waddle

Security Measures

- Only parents with valid email can register in the app
- All passwords are encrypted
- Anonymity to database

Privacy Measures

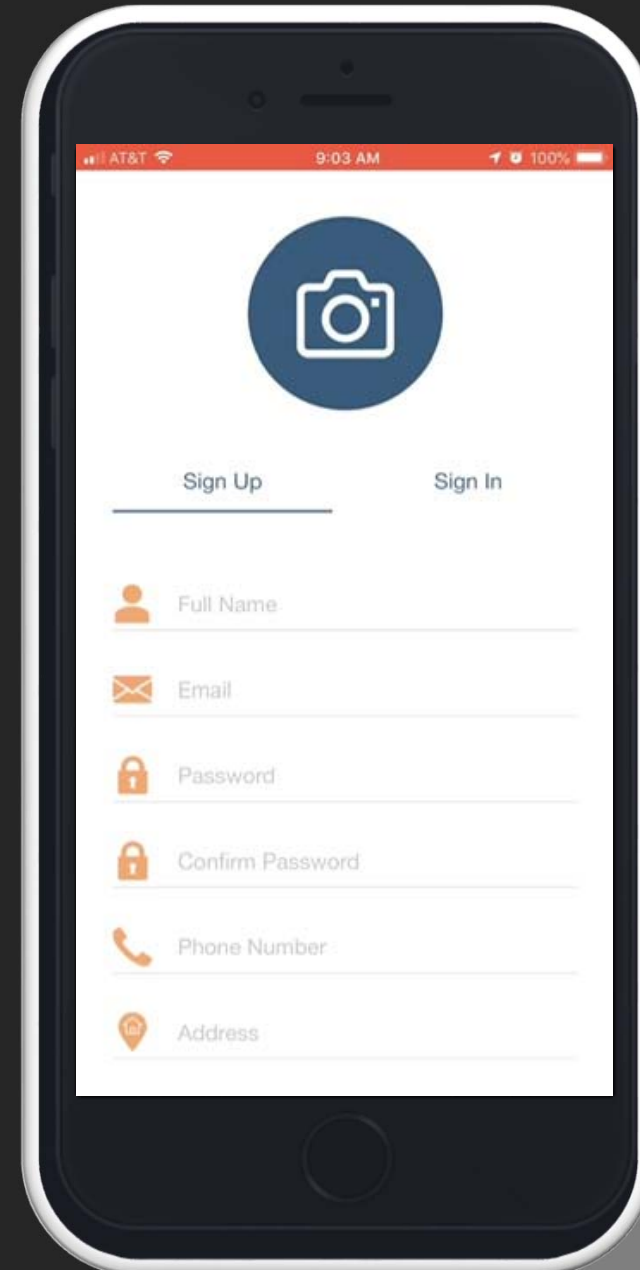

- Only volunteering supervisors are being tracked when walking the kids to school
- Tracking is only available to participating kids' parents

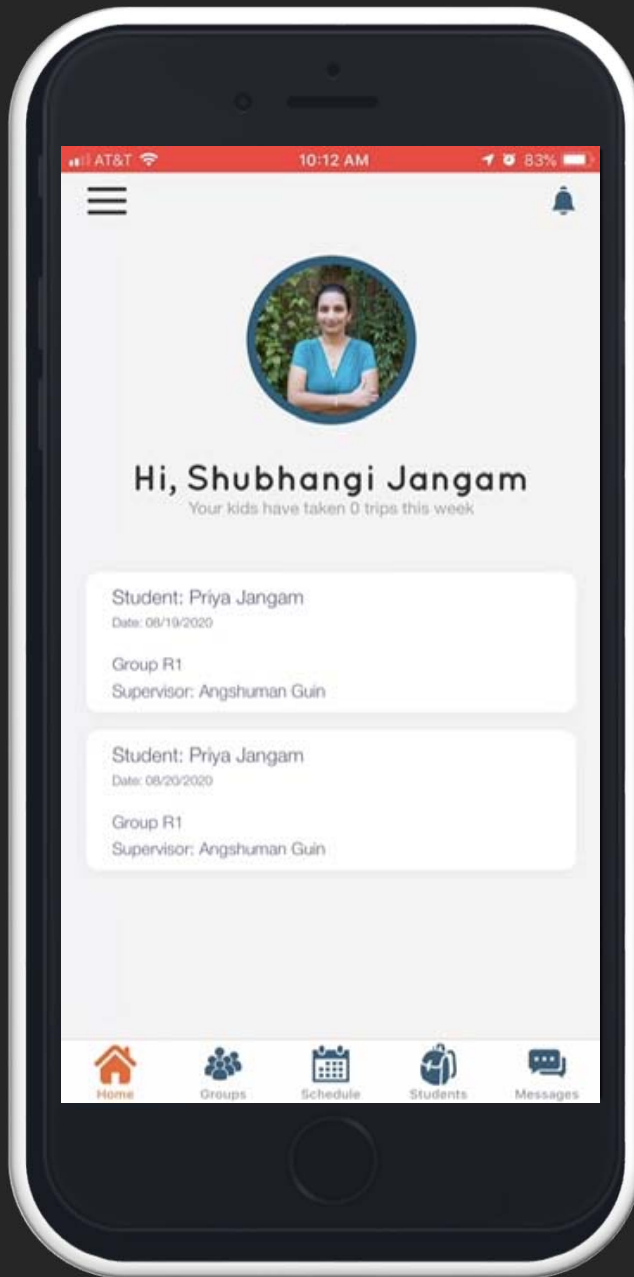

Registration

Getting started

- Sign up
- Email validation
- One-time password
- Registration complete
- Sign in
- Complete profile
- Add student information

Home Screen

Quick access to

- Profile
- Shortcuts
- Upcoming walk-trip reminder
- Access to trip tracking
- Indicates new message and notification
- Counts accomplishments

For first time users, the app will provide guidance

Groups

Finding the right group to walk with

- Groups are listed for each subdivision
- Parent can locate the nearest stop on the map

In the Database

- Pre-defined routes per subdivision
- Pre-defined stops on those routes that parent can select for pickup
- Groups formed with a subset of stops within a route based on proximity of students

Group ratio
1 supervisor : 5-6 kids

Schedule

To schedule a walk trip

- On home screen click on schedule shortcut
- Select a date
- Preview schedule for your kids and you as supervisor
- To create a new trip press +
- Complete selections
- Review list of all trips in menu

Schedule
for kids to
walk

Schedule for
supervisor
